

## **Crowns and Bridges**

Crowns and bridges usually take two appointments to complete. During the first visit, the teeth are prepared and temporary crowns or bridges are placed to protect the teeth and keep things from shifting while the custom restorations are being made.

Since the teeth may be anesthetized, the tongue and lips may also be numb. Please refrain from eating and drinking hot beverages until the numbness is completely worn off.

It is normal to experience some temperature and pressure sensitivity. This sensitivity should subside a few weeks after the placement of the final restoration.

If your bite feels uneven, if you have persistent discomfort, or if you have any other questions or concerns, please us 610 647-7272.
