

Dentures

What to Expect

Your mouth will adapt to the new denture daily. As your tissues adapt, sore spots (ulcers) may develop. If so, apply oral aloe gel to the area to reduce sensitivity and swelling.

If your bite feels "off", please call us and make an appointment for an adjustment.

It is best to remove your denture at bedtime in order to give your mouth a rest.

Care of your Dentures

For cleaning, brush with toothpaste or any denture cleaner.

Soaking your denture in water prevents the acrylic from drying out and becoming brittle.
